

Opening Doors to Clinical Trials Survey

2024 National Poll

Background

Over the past three decades, clinical trials have made strides toward inclusivity, yet significant gaps remain in representation, particularly among LGBTQIA+ adults and people of color.

This historical underrepresentation means that crucial insights about potential treatments and vaccines are often missing, leaving us without a full understanding of their effectiveness and safety for all groups.

To better understand the attitudes and behaviors of LGBTQIA+ adults and people of color regarding clinical trials, the PAN Foundation launched the Opening Doors to Clinical Trials Survey in 2024.

Research objectives

This research explores key areas that will enhance our ability to serve these communities effectively:

- **Awareness and perception:** Investigate familiarity with clinical trials and the factors shaping these perceptions.
- **Knowledge and trusted sources:** Identify gaps in understanding how clinical trials work and highlight reliable sources of information.
- **Participation and key factors:** Assess participation rates among LGBTQIA+ adults and people of color and the factors that influence their decisions.
- **Interest in clinical trials and informational needs:** Determine what resources can help build trust within LGBTQIA+ and people of color communities regarding clinical trials.

Research methodology

- The survey was conducted July 1–19, 2024, by The Harris Poll on behalf of the PAN Foundation
- A sample of 4,492 adults in the United States participated in the survey.
- The survey specifically oversampled people of color and LGBTQIA+ adults to ensure their voices were adequately represented.
- Data for these subgroups were weighted individually based on factors such as education, age by gender, region, household income, household size, marital status, employment, and political party affiliation to accurately reflect their proportions in the population.
- The survey was offered in both English and Spanish.

Key findings

- **Highly positive perception of clinical trials:**
 - Most LGBTQIA+ adults (**86%**) and people of color (**83%**) perceive clinical trials positively.
- **Strong interest in trial participation:**
 - **3 in 5** (61%) respondents, regardless of background, express interest in participating in clinical trials in the future, with even higher interest among LGBTQIA+ adults (**65%**) and significant interest from people of color (**58%**).
- **Low invitation rates despite high provider trust:**
 - **Only 1 in 5** people of color (22%) and LGBTQIA+ adults (20%) report that their healthcare provider has discussed clinical trials with them. This is notable, given that a significant majority—80% of people of color and 79% of LGBTQIA+ adults—trust their providers to act in their best interests.

Notation guide

Please refer to this slide for explanations of the various notation used throughout this survey.

	Total	Race/Ethnicity						
		POC	Black	Hispanic	Asian	NH/PI	AI/AN	White
		A	B	C	D	E	F	G
Quotas	-	-	1,000	1,000	1,000	100	100	500
Sample size	4,492	3,315	1,000	1,003	1,003	105	104	502

LGBTQIA+ status	
LGBTQIA+	Non-LGBTQIA+
H	I
745	-
1,047	3,436

Significance indicators: ▲▼

Statistical testing was performed between race/ethnicity groups and people of color (A-G), and between LGBTQIA+ and Non-LGBTQIA+ adults (H/I).

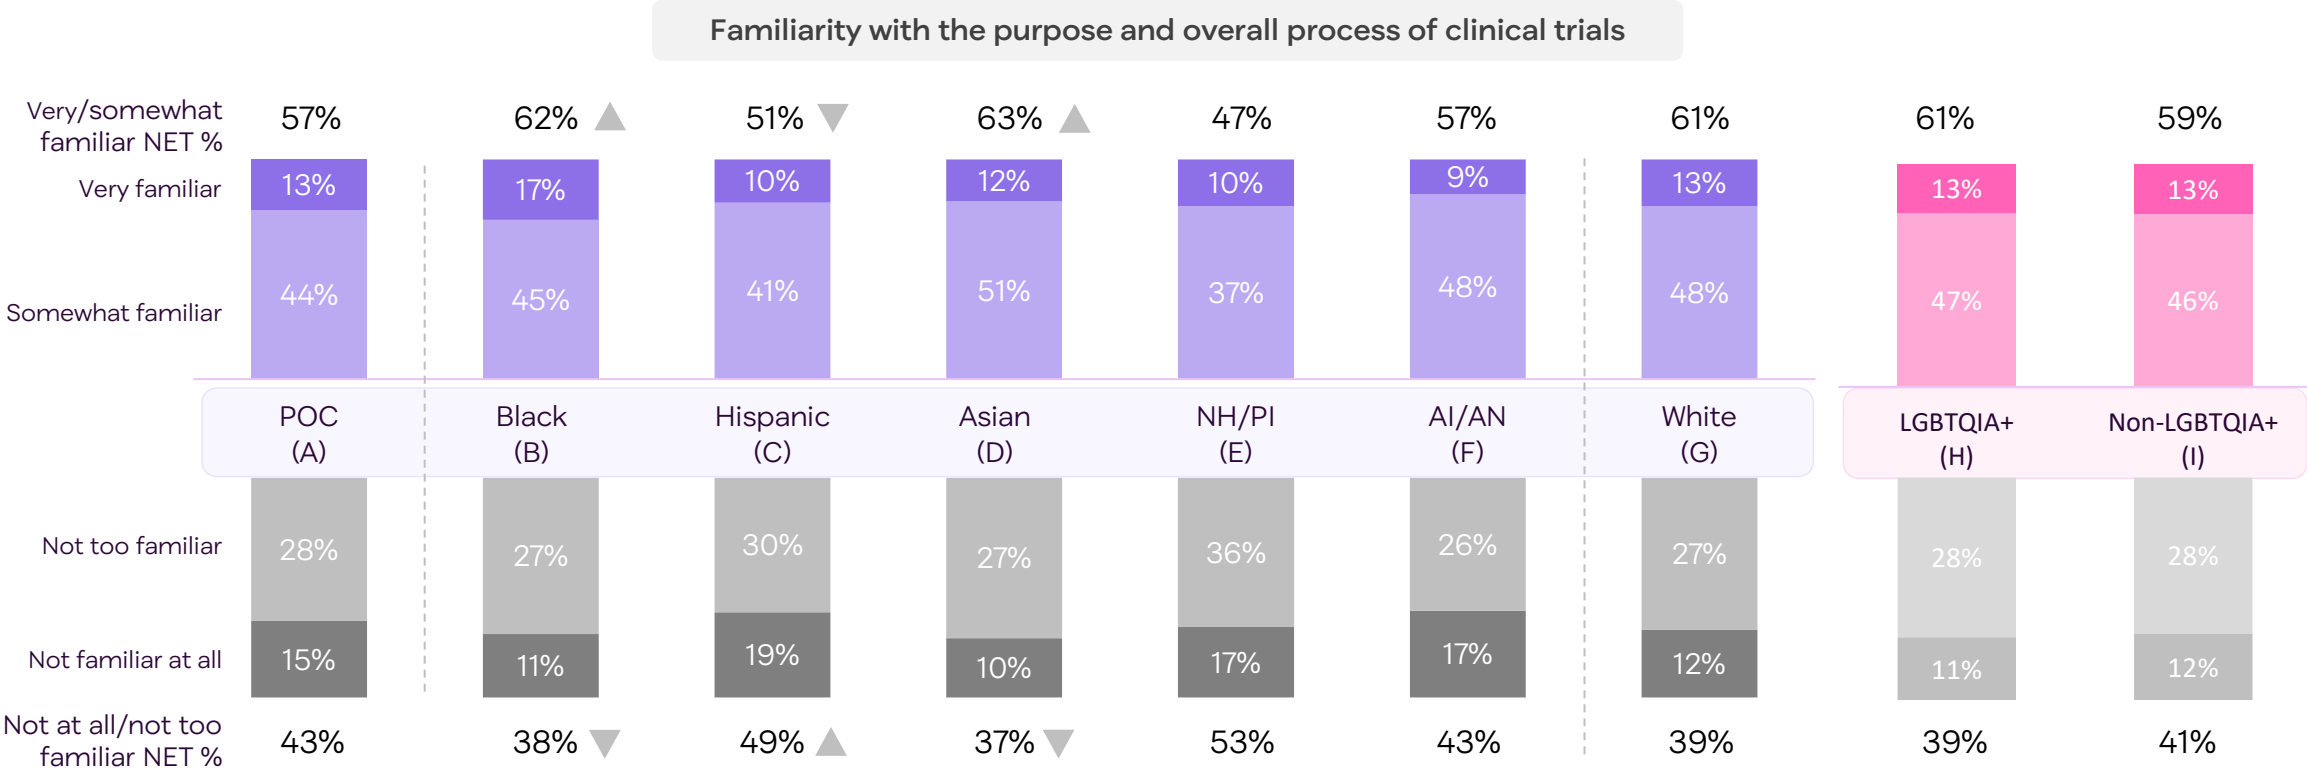

An arrow indicates that a particular subgroup population is statistically significantly more or less likely to agree with or select a particular statement or response option than another subgroup population.

(For example, an arrow next to a Hispanic population (C) stat would indicate that Hispanic adults are significantly more or less likely than people of color (A) to agree/select that option.)

Awareness and perception

3 in 5 people of color and LGBTQIA+ adults say they are familiar with clinical trials

Black and Asian adults express the highest familiarity, while Native Hawaiian/Pacific Islanders and Hispanic adults are most likely to say that they are unfamiliar with clinical trials.

Respondents, regardless of background, report largely positive perceptions of clinical trials

However, Hispanic and Asian adults are most likely to have a negative perception of clinical trials.

Positive perceptions of clinical trials are rooted in their value for medical advancements, while negative perceptions are largely based in a lack of trust

Positive mentions*	56%
USAGE (NET)	12%
Good for testing new products/medicines	5%
Helps to treat disease/medical condition	4%
Provides information about condition/helps diagnose disease on time	2%
IMPROVEMENT/ADVANCEMENT (NET)	12%
Leads to development of new treatment/cure to various medical conditions	5%
Helps provide medications/new medications	4%
Advancement in medical/science field/for better healthcare	3%
APPEAL (NET)	12%
Necessary/Important/Beneficial	7%
Good/Great/Like it (unsp)	3%
EFFICACY (NET)	10%
Helps to validate effectiveness of the drug/treatment/procedure	7%
Helps to learn how the drug/medicine works	2%
BENEFITS (NET)	9%
Caring/Helps people	4%
Offers good money/compensation	2%
SAFETY (NET)	5%
Helps to prove medication is safe/has no side effects	3%
FAMILIARITY (NET)	3%
Other positive mentions	3%

Negative mentions	10%
LACK OF APPEAL (NET)	2%
Not trustworthy/Do not trust big/drug companies	1%
Not safe/risky	2%
Not effective/Does not work	1%
Not safe/Risky	1%
Does not provide facts/details about process	1%
Dislike being a guinea pig/Do not want to be a test subject	1%
Concerns with potential side effects	1%
Other negative mentions	3%
Neutral mentions	4%
Not familiar/Not aware of clinical trials	2%
My opinion	1%
Other neutral mentions	1%
None/Nothing	2%
Don't know	2%
Decline to answer	4%

Before asking follow-up questions around perception and interest, we provided respondents with myth-busting facts about clinical trials

Statement shown to respondents

Now we are going to share some basic facts about clinical trials. The goal of clinical trials is to closely evaluate the safety, efficacy and compare the effectiveness of new treatments, medications, or interventions, in hopes of advancing medical knowledge and improving patient care. Some general facts about clinical trials include the following:

- There are clinical trials for all types of people – participants of different genders, sexual orientations, and racial / ethnic backgrounds can participate in clinical trials and will be treated no differently than other participants.
- Treatments and care provided in clinical trials are free to participants.
- Clinical trials are not only for sick people – depending on the trial, individuals with medical conditions / diseases as well as those that are healthy are encouraged to participate.
- Patients that participate in clinical trials provide their informed consent to participate.
- Participants are monitored closely by trained, licensed healthcare professionals throughout the trial.
- Participants can leave a clinical trial at any time if their health worsens or if they simply no longer want to participate.

After reading myth-busting statements about clinical trials, positive perceptions increase

Perception of clinical trials (*Post-test*)

Perception of clinical trials (*Pre-test*)

Many find value in clinical trials, citing that they improve the safety and efficacy of treatments

Commentary on positive perception of clinical trials

*“I think of clinical trials positively because you **gain valuable insight and knowledge** from them that really can't be gained in any other way.”*

Female, Age 32, Black, Non-LGBTQIA+

*“Clinical trials in the past have **found effective treatments** for a number of medical conditions and have had **more positive results than negative.**”*

Male, Age 68, Black, Non-LGBTQIA+

*“I believe they are **crucial** in determining the **safety and efficacy** of drugs and products before they are available to the public.”*

Female, Age 27, white, LGBTQIA+

*“I think clinical trials are **essential** to proving whether a treatment works before it is published to the general public.”*

Male, Age 19, Asian, LGBTQIA+

Knowledge and interest

Respondents seem to know the basic facts about clinical trials, particularly white adults

Knowledge is lower around whether participants need to pay for their own medicines, tests, and procedures.

Knowledge on clinical trials (% answered correctly)

	Race/Ethnicity							LGBTQIA+ Status	
	POC	Black	Hispanic	Asian	NH/PI	AI/AN	White	LGBTQIA+	Non-LGBTQIA+
	A	B	C	D	E	F	G	H	I

Despite limited knowledge of clinical trials, 3 in 5 adults say they are interested in participating

LGBTQIA+ adults in particular express high interest in participation.

Interest in participating in clinical trials

Most respondents say that they would need to know more about the specifics of clinical trials to consider participating

However, two thirds or more report that they would consider participating if their healthcare provider encouraged them or if they knew the findings would help people who look or identify like them.

Sentiments regarding interest in participating in clinical trials

	Race/Ethnicity							LGBTQIA+ status	
	POC	Black	Hispanic	Asian	NH/PI	AI/AN	White	LGBTQIA+	Non-LGBTQIA+
	A	B	C	D	E	F	G	H	I
I would need to know more about the specifics of clinical trials to consider participating in one.	85%	84%	83%	91% ▲	76%	96%▲	89%	88%	87%
I would be interested in participating in a clinical trial if I had a serious disease / condition and felt like a clinical trial was my last option.	80%	79%	79%	85% ▲	78%	85%	85% ▲	83%	81%
I would consider participating in a clinical trial if I knew the findings would help people who look or identify like me.	71%	74% ▲	68%	71%	67%	73%	66%	74%	71%
I would consider participating in a clinical trial if my healthcare provider encouraged me to do so.	68%	67%	65%	73% ▲	65%	79%	75% ▲	74%▲	70%

More information on cost and reimbursements and patient confidentiality may influence willingness to participate

White and Asian adults appear particularly likely to be possibly influenced by the *right* information.

How much information would influence willingness to participate in clinical trials

	Race/Ethnicity							LGBTQIA+ Status	
	POC	Black	Hispanic	Asian	NH/PI	AI/AN	White	LGBTQIA+	Non-LGBTQIA+
	A	B	C	D	E	F	G	H	I
Costs and reimbursements	78%	78%	76%	82% ▲	71%	86%	82%	83%	81%
Patient confidentiality	78%	78%	76%	80%	77%	80%	81%	80%	79%
Coordination and management of care	78%	78%	76%	81% ▲	74%	76%	83% ▲	85% ▲	80%
Location of the clinical trial	77%	74% ▼	75%	82% ▲	71%	85%	84% ▲	83%	79%
Flexibility of scheduling	76%	74% ▼	75%	82% ▲	67%	84%	83% ▲	84% ▲	79%

Education around clinical trials would likely go far to drive participation for certain demographic groups

Asian and LGBTQIA+ adults appear particularly motivated by more information.

What might increase interest in participating in clinical trials

TOP 5 THINGS THAT MIGHT INCREASE INTEREST	Race/Ethnicity							LGBTQIA+ status	
	POC	Black	Hispanic	Asian	NH/PI	AI/AN	White	LGBTQIA+	Non-LGBTQIA+
	A	B	C	D	E	F	G	H	I
Clear information about the risks / considerations	42%	40%	38%	48%▲	39%	52%	47%	49%▲	44%
Easy to understand information about what clinical trials entail	38%	33%▼	38%	40%	33%	48%	38%	43%▲	38%
If I were sick and needed treatment now	37%	35%▼	36%	43%▲	44%	40%	42%	44%▲	39%
1:1 conversation with my primary care provider (PCP)	36%	35%	32%	40%▲	36%	51%▲	43%▲	43%▲	38%
If it were to benefit a cause that is important to me	32%	30%	32%	32%	34%	33%	29%	37%▲	31%

Trusted sources of information

Respondents report largely positive relationships with their healthcare providers, particularly Black adults

Hispanic and Native Hawaiian/Pacific Islanders are least likely to say that they have a positive relationship with their healthcare providers.

Around 9 in 10 respondents with a healthcare provider, regardless of background, trust that their provider has their best interest in mind when making healthcare decisions.

Sentiments toward healthcare system/providers

	Race/Ethnicity							LGBTQIA+ status	
	POC	Black	Hispanic	Asian	NH/PI	AI/AN	White	LGBTQIA+	Non-LGBTQIA+
	A	B	C	D	E	F	G	H	I
I trust that my healthcare provider has my best interest in mind when making healthcare decisions.	90%	90%	88%	90%	89%	96%	89%	90%	90%
My healthcare provider includes my input in making healthcare decisions.	89%	90%	89%	91%	89%	86%	91%	90%	89%
My healthcare provider stays current on the latest medical advances.	88%	88%	87%	88%	89%	90%	90%	85%	88%
My healthcare provider informs me of all the latest medical advances.	77%	81% ▲	77%	73% ▼	82%	67% ▼	73%	71%	76% ▲

Most have learned what they know about clinical trials from their own research or their healthcare provider

Sources where they learned about clinical trials (among those who tried to find info on clinical trials)

	Race/Ethnicity							LGBTQIA+ Status	
	POC	Black	Hispanic	Asian	NH/PI*	AI/AN*	White	LGBTQIA+	Non-LGBTQIA+
	A	B	C	D	E	F	G	H	I
HCP NET % <i>(My PCP/a different healthcare provider besides my PCP NET %)</i>	44%	47%	42%	45%	39%	38%	50%	39%	46% ▲
TOP 5 SOURCES									
My own online research	45%	45%	43%	50% ▲	44%	53%	46%	52%	48%
My primary care provider (PCP)	38%	42% ▲	36%	40%	32%	30%	41%	34%	39%

*Social determinants of health were categorized as follows:

“Good” – those who report that they never experience; “Poor” – those who experience on a daily / weekly basis: limited or uncertain access to enough food or to nutritious food, trouble paying my electricity, gas, or water bills, worries about losing my current housing, lack of access to transportation, difficulty securing childcare
